CAR FIBREGLASS®

We convert light commercial vehicles since 1974.

**Our mission is
to improve the vehicle functionality
for professional use**

CAR FIBREGLASS

WE ARE ALWAYS IN LINE WITH THE TIMES

A constant improvement is our main purpose. Through research, use of new materials and production systems, we optimise the internal process so to increase quality and reduce delivery times of our products.

Since 2017 we have introduced a design department with cad/cam scanner and 3D scanner.

CAR FIBREGLASS

WE LISTEN TO OUR CLIENT

A professional service is essential to us. For this reason we pay specific attention to the clients' needs, we promptly give the information required and we propose the most suitable solutions.

CAR FIBREGLASS

WE RESPECT THE ENVIRONMENT

We are eco-friendly. This is why we are committed to utilise the resources in the best possible way, using recyclable materials at low environmental impact, constantly monitoring potential safety risks. We are certified ISO9001 since 1998, ISO14001 since 2012 and OHSAS 18001 since 2015.

COVER BY CAR FIBREGLASS

During 1990s we developed the first items of **COVER**, the internal cladding which makes the load compartment perfectly

WATERPROOF, WASHABLE

AND RESISTANT TO DISINFECTION.

The implementation of some European regulations, such as HACCP concerning the way to deal with food and the first guidelines on medicine transportation, created the basis for **COVER** success, whose production increased from some tens items sold in Italy in 2000 up to 2500 pieces sold in 25 countries in 2017.

In order to satisfy the increasing request, we have realized a new line of production in ABS that permits a quality products improvement, reduces the environmental impact and increases safety at work.

COVER ABS

COVER

FOCAL POINT FOR COMMERCIAL VEHICLES CLADDING

COVER is a kit composed by panels which follow the shape of the vehicle internal sides, it is very easy to assemble and it does not modify the dimensions of the load compartment. **It is the internal lining that makes the cargo compartment perfectly:**

- **WASHABLE**
- **WATERPROOF**
- **RESISTANT TO DISINFECTION**

Moreover **COVER** is:

- **Simply to assemble**
- **Light**, therefore it does not require any update on the vehicle registration certificate
- **Removable and transferable** on another identical vehicle

COVER

COMPLIANT WITH REQUIREMENTS OF THE FOLLOWING EUROPEAN REGULATIONS

- **GUIDELINES** concerning the correct distribution of **medicine for human use** (2013/C343/01)
- **HACCP RULE** (Regulation CE n. 852/2004 on **food hygiene**)
- **ADR RULE** concerning **dangerous materials** transport (Guideline 2008/68/CE)
- **RULE ON ANIMALS PROTECTION** during their transportation (Regulation CE n.1/2005)

STEP 1: FLOOR

STEP 2: ROOF

STEP 3: SIDE WALLS

STEP 4: BULKHEAD AND BACK DOORS

COVER

IDEAL FOR MEDICINE TRANSPORTATION

COVER is now, more than ever before, the focal point for vehicles cladding destined to medicine transportation. Infact it is the only coating which combines:

- **Compliance with European guidelines on medicine transport** (2013/C343/01, GDP).
- **Temperature maintenance between 15°C and 25°C inside the load compartment**, even with extreme weather conditions, thanks to an air conditioning extension.
- **Unvaried temperature**, thanks to the exclusive canalization created by **CAR FIBREGLASS**, which guarantees a homogeneous air distribution in the whole load compartment. Medicine maintenance is assured even after several and repeated opening of the doors.
- **Volume and load capacity remain intact**, infact **COVER** weight is within 5% of tare, therefore it is not necessary to update the vehicle registration certificate.
- **Consumption is restrained** because the air conditioning extension does not need any additional compressor.

COVER

PERFECT FOR FOOD TRANSPORTATION

COVER is compliant with HACCP regulation on ways to deal with food, with reference to transportation not needing any temperature lower than 15°C.

SOLUTION FOR FOOD UNDER HACCP

SOLUTION FOR FINE WINES

COVER, together with an air conditioning extension, protects wine from the heat which can cause its alteration. Producers and wine experts insist on the importance of having a transport with a kind of controlled temperature, approximately between 15°C and 20°C, in order to protect the organoleptic qualities of the product.

COVER

IDEAL FOR DANGEROUS GOODS TRANSPORTATION

COVER is compliant with the following requirements of ADR regulation:

- Floor made with non metal material
- Full side walls, with no interstices
- Load compartment isolated from the cabin

SOLUTION FOR ADR TRANSPORTATION

COVER

PERFECT FOR FLOWERS AND PLANTS TRANSPORTATION

COVER is functional for the transportation of flowers and plants because it combines an easy cleaning with the maintenance of ideal thermal conditions.

TRANSPORT SOLUTION

COVER

IDEAL FOR ANIMAL TRANSPORTATION

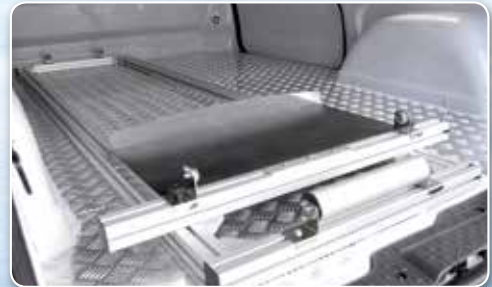

COVER is compliant with regulations referred to animal transport which impose, among others, suitable hygienic conditions.

COVER

IDEAL FOR CORPSES TRANSPORTATION

COVER is the only cladding made with a non metal material, perfectly washable and disinfectable, therefore it is compliant with the sanitary rules in force for the recovery of corpses.
